

ABSTRACT

There is described an electronic mail communication system, which conduct an image-forming operation and a finishing processing at a site of a receiver, based on the command sent from the sender. The system includes an electronic mail creating apparatus, which has an image data acquiring means, a finishing information acquiring means and a mail data generating means for generating mail data including address of the receiver, finishing information and image data, and an electronic mail receiving apparatus, which receives the mail data including the image data and the finishing information and acquires the image data and the finishing information by means of an analyzing means, and then, conduct a finish setting by comparing the finishing information with the contents of outputtable finishing operation, so as to conduct the image-forming operation and the finish processing.
